

PRO AFP to Image

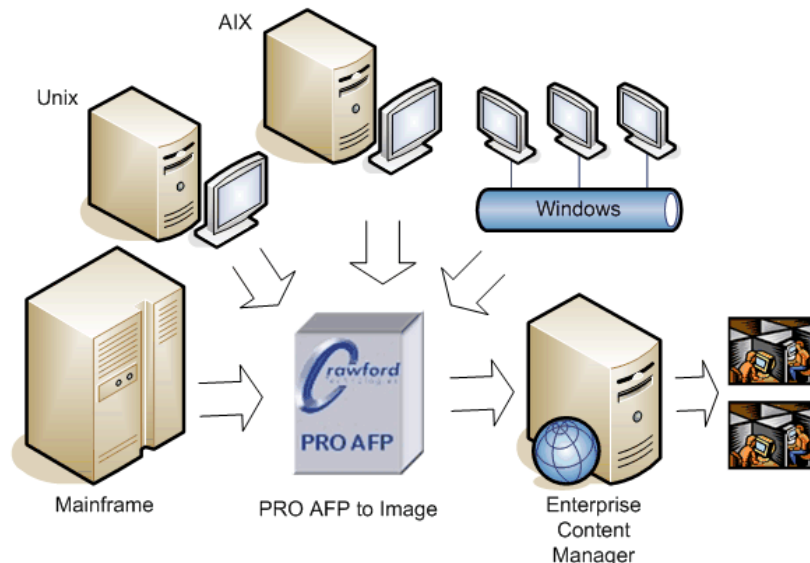

Store Mission-Critical Documents in Your ECM Systems

PRO AFP to Image is designed for those AFP printer customers who want to decisively improve the accessibility and organization of their critical AFP data by meshing it with their ECM systems – without making costly architecture changes. **PRO AFP to Image** dynamically converts Advanced Function Presentation (MODCA-P, AFPDS and AFP Category 5) documents to TIFF or PNG formats.

TIFF is the format of choice for archiving business documents as images and it is used in many ECM implementations. Other imaging formats can only handle single page files, which are then very difficult to reassemble into multi page documents. TIFF offers an important advantage: it can hold either single or multiple pages in one file. Using the powerful built-in **PRO Splitter**, organizations can easily create TIFF files containing complete legal documents, customer statements, bills, invoices, policies, and other important data.

PRO AFP to Image delivers high-speed performance and stability indispensable in high volume, mission-critical printing environments. Whether organizations want to archive and retrieve their AFP documents or to make them available to both staff and customers in an interactive mode, **PRO AFP to Image** is the key enabler: it provides perfect fidelity TIFF or PNG images of the business data, indexed and, if need be, enhanced or restructured.

During the conversion, **PRO AFP to Image** optimizes images for archiving, retrieval and display, using our powerful *PRO* options, eliminating the need for costly changes to the native print applications. The optional **PRO Indexer** can create index files or database commands, mark document breakpoints and generate image names using the contents of the original document, such as account number, customer number, customer name and statement date. The optional **PRO Document Enhancer** can add or suppress text, barcodes and images or rearrange the document pages during the conversion.

Platform Independence

PRO AFP to Image is available on AIX, Linux, Solaris, HP-UX, z/OS (all versions) and Windows platforms allowing users to install the software where they need it.
