

# PRO Image to HTML

## Take Image Output Online

**PRO Image to HTML** provides an easy migration path for customers who want to move TIFF images to a special, browser-compatible PNG format without making costly application modifications. Crawford Technologies Inc. provides a cost-effective, host-based software tool that enables customers to add images from scanners or archives to transactional data to create important new customer or internal use online documents, such as statements, invoices and notices.

**PRO Image to HTML** creates images that are perfect representations of the original TIFF files. During the conversion, **PRO Image to HTML** can optimize TIFF images for archiving, retrieval and display using powerful **PRO** options. In particular, with the help of our [PRO Dynamic Document API](#), customers can add HTML hyperlinks.

**PRO Image to HTML** can also be used by interactive applications to convert TIFF legacy documents dynamically at display or retrieval time. The high-speed performance of **PRO Image to HTML** permits this dynamic conversion. This can save significant data storage costs and eliminate expensive batch transformation processing.

Whether organizations want to archive and retrieve their TIFF documents in the HTML-compatible PNG format or to make them available to both staff and customers in an interactive mode, **PRO Image to HTML** is the key enabler: it provides high-fidelity images of the business data in a highly popular, browser-displayable format.

**PRO Image to HTML** is available on AIX, Linux, Solaris, HP-UX, z/OS and Windows platforms allowing users to install the software where they need it.
