

PRO Image to Metacode

PRO Image to Metacode provides an easy migration path for customers who want to move TIFF images to Xerox architecture without making costly application modifications.

Crawford Technologies Inc. provides a cost-effective, host-based software tool that interprets TIFF images and transforms them into pages of standard Xerox Metacode files that can be printed, viewed or archived on Xerox compatible programs.

The support for TIFF input files by the CrawfordTech PRO transform suite enables customers to add images from scanners or archives to transactional data to create powerful new customer or internal use documents such as image statements, manufacturing documentation, invoices and notices.

PRO Image to Metacode creates images that are perfect representations of the original TIFF files. **PRO Image to Metacode** also delivers high-speed performance and stability indispensable in high volume printing environments.

During the conversion, **PRO Image to Metacode** can optimize TIFF images for archiving, retrieval and display using powerful [PRO](#) options.

PRO Image to METACODE is available on Linux, AIX, Solaris, HP-UX, z/OS and Windows platforms allowing users to install the software where they need it.
