

PRO Image to PS

PRO Image to PS provides an easy migration path for customers who want to move TIFF images to PostScript architecture without making costly application modifications.

Crawford Technologies Inc. provides a cost-effective, host-based software tool that interprets TIFF images and transforms them into pages of PostScript files that can be printed, viewed or archived on PostScript compatible programs.

PRO Image to PS provides the customers with all the advantages of distributed printing in PostScript, one of the de facto standards in the high volume printing market.

The support for TIFF input files by the CrawfordTech PRO transform suite enables customers to add images from scanners or archives to transactional data to create powerful new customer or internal use documents such as image statements, manufacturing documentation, invoices and notices.

PRO Image to PS creates images that are perfect representations of the original TIFF files. During the conversion, **PRO Image to PS** can also optimize TIFF images for archiving, retrieval and display using powerful [PRO](#) options.

PRO Image to PS is available on Linux, Solaris, AIX, HP-UX, z/OS and Windows platforms allowing users to install the software where they need it.
