

# PRO PCL to Image

**Get Your PCL Documents out of Silos and into Your ECM Systems**

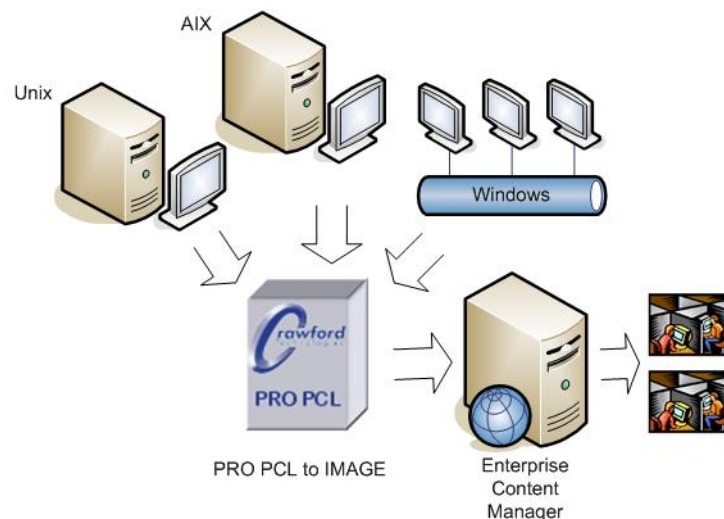

**PRO PCL to Image** is designed for PCL printer customers who want to utilize their PCL applications in **Enterprise Content Management (ECM)** systems without making costly architecture changes. **PRO PCL to Image** dynamically converts PCL images in TIFF and PNG formats.

**TIFF** is the format of choice for archiving business documents as images and it is used in many ECM implementations. Other imaging formats can only handle single page files, which are then very difficult to reassemble into multi page documents. TIFF offers an important advantage: it can hold either single or multiple pages in one file. Using the powerful built-in **PRO Splitter**, organizations can easily create TIFF files containing complete customer statements, bills, invoices, policies, and other important documents.

**PRO PCL to Image** software offers the best performance available to provide speedy conversions from PCL to TIFF or PNG. Whether organizations want to archive and retrieve their PCL documents or to make them available to both staff and customers in an interactive mode, **PRO PCL to Image** is the key enabler: it provides high-fidelity TIFF or PNG images of the business data, indexed and, if need be, enhanced or restructured.

The converted TIFF and PNG images are perfect representations of the original legacy files. All PCL fonts, overlays and other resources are reproduced exactly as they are on PCL printers.

During the conversion, **PRO PCL to Image** optimizes images for archiving, retrieval and display, using our powerful *PRO* options, eliminating the need for costly changes to the native print applications. The optional **PRO Indexer** can create index files or database commands, mark document breakpoints and generate image names using the contents of the original document, such as account number, customer number, customer name and statement date. The optional **PRO Document Enhancer is a powerful reengineering tool**, which can add or suppress text, barcodes and images or rearrange the document pages during the conversion.

## Platform Independence

**PRO PCL to Image** is available on Linux, AIX and Windows platforms allowing users to install the software where they need it.
