

PRO PCL to Text

PRO PCL to Text is an ideal tool for customers who want to dynamically convert their desktop printer legacy documents from PCL format into text files.

CrawfordTech's **PRO PCL to Text** transformation product allows customers to convert their PCL data into a format that can be used with their document composition software as variable data or stored in preexisting data storage applications.

The **PRO PCL to Text** allows clients to dynamically create text files, which contain all of the text from the original PCL input files. **PRO PCL to Text** makes it very easy for customers to get the text out of their legacy PCL print streams without incurring any IT modification costs.

What is more, the **PRO PCL to Text** conversion software allows the users to determine whether the text in PCL overlays should be converted or not. It also gives the users the ability to control the output text's character encoding - ASCII or EBCDIC - and how that text should be formatted.

Platform Independence

PRO PCL to Text is available on all Windows operating systems, as well as under Solaris, AIX, Linux and HP-UX. That allows the customers to use **PRO PCL to Text** when and where it is most convenient.
