

PRO PDF to Image

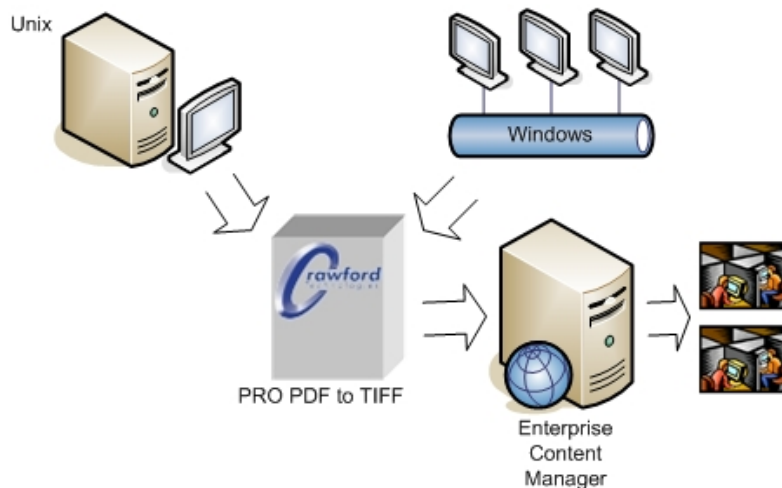

Use **PRO PDF to Image** to display the output of PDF applications on the Web. Make documents available quickly and in the same format to customer service staff and to the customers.

PRO PDF to Image provides a valuable tool that allows PDF printer customers to utilize their print applications in Enterprise Content Management (ECM) systems without making expensive architecture changes. **PRO PDF to Image** converts PDF print streams to images in TIFF or PNG formats.

PRO PDF to Image offers the best performance available to provide speedy conversions from PDF to TIFF or from PDF to PNG. Whether organizations want to archive and retrieve their PDF documents or to make them available to both staff and customers in an interactive mode, **PRO PDF to Image** is the key enabler: it provides high-fidelity TIFF or PNG images of the business data, indexed and, if need be, enhanced or restructured.

TIFF is the format of choice for archiving business documents as images and it is used in many ECM implementations. Other imaging formats can only handle single page files, which are then very difficult to reassemble into multi page documents. TIFF offers an important advantage: it can hold either single or multiple pages in one file. Using the powerful built-in [PRO Splitter](#), organizations can easily create TIFF files containing complete customer statements, bills, invoices, contracts, policies, and other important documents.

PRO PDF to Image creates TIFF and PNG images that are perfect representations of the original print files. All PS fonts, forms and other resources are reproduced exactly as they are on PDF printers.

During the conversion, **PRO PDF to Image** optimizes images for archiving, retrieval and display, using the following powerful PRO options, eliminating the need for costly changes to the native print applications:

- The optional [PRO Indexer](#) can create index files or database commands, mark document breakpoints and generate image names using the contents of the documents, such as account number, customer number, customer name and statement date.
- The optional [PRO Document Enhancer](#) is a powerful document re-engineering tool, which can add, modify or suppress text, barcodes and images or rearrange the document pages during the conversion.
- With the optional [PRO Splitter](#) plug-in, large input files can be split during conversion into smaller multi page files, e.g. containing complete individual customer statements - without the need to modify the

application that creates the print file. Having this capacity opens the door to Electronic Bill Presentation & Payment (EBPP). CrawfordTech has provided components for major vendors in this market since 1996.

- The optional [PRO Concatenator](#) component of the PRO Suite of transforms, can concatenate multiple like type files from various sources into a single file. The user can specify which pages are to be pulled from each file and the sequence they should be placed in.

Platform Independence

PRO PDF to Image is available on Linux, Solaris and Windows platforms allowing users to install the software where they need it.
