

PRO PDF to Metacode

Use **PRO PDF to Metacode** to migrate your standard PDF applications to Xerox print architecture and high speed printers – smoothly and cost-effectively. Eliminate the need to support both PDF and Xerox printer hardware and software.

Clients often want to print documents on laser printers using the popular PDF page description language. Yet most high speed Xerox printers do not have this capability built into them.

PRO PDF to Metacode is a software product for Windows and Unix that interprets standard PDF language print streams and resources and transforms them into Xerox metacode. This allows organizations to combine the advantages of the industry standard PDF language with the low page cost, high quality and features of Xerox high speed printers. **PRO PDF to Metacode** performs an object-to-object transformation creating an optimized and compatible Metacode file.

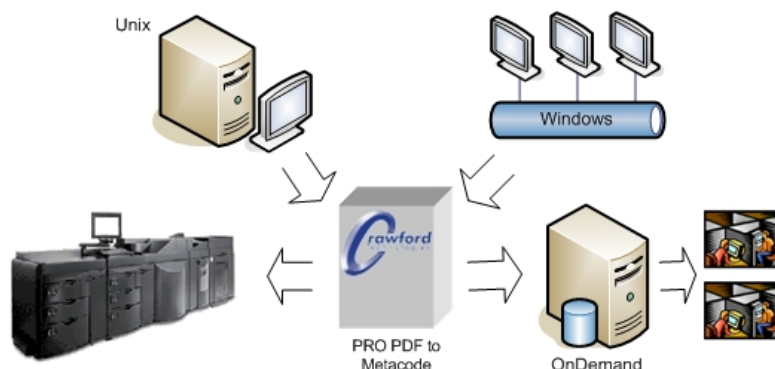

PRO PDF to Metacode is flexible enough to fit into virtually any system environment. Its rugged interpreter handles PDF output from a variety of sources including Windows and Unix applications

PRO PDF to Metacode offers support for the extended features of Xerox printers including highlight color, collated copies, forms merge, various paper sizes including 11 by 17 inches and a host of others. This allows clients to get the maximum value from their existing printers.

PRO PDF to Metacode allows Xerox printers to be used for many new and exciting applications, which in the past would have been impossible. This extends their usefulness, increases their value to the organization, provides integration flexibility, and positions clients for the future.

PRO PDF to Metacode can be used for the following:

- Printing on any Xerox-compatible printer
- Metacode standardization
- Disaster recovery
- Workload balancing

The **PRO PDF to Metacode** product can be extended with the following options:

- The optional **PRO Indexer** can create index files or database commands, mark document breakpoints and generate image names using the contents of the documents, such as account number, customer number, customer name and statement date.

- The optional [PRO Document Enhancer](#) is a powerful document re-engineering tool, which can add, modify or suppress text, barcodes and images or rearrange the document pages during the conversion.
- With the optional [PRO Splitter](#) plug-in, large input files can be split during conversion into smaller multi page files, e.g. containing complete individual customer statements - without the need to modify the application that creates the print file. Having this capacity opens the door to Electronic Bill Presentation & Payment (EBPP). CrawfordTech has provided components for major vendors in this market since 1996.
- The optional [PRO Concatenator](#) component of the PRO Suite of transforms, can concatenate multiple like type files from various sources into a single file. The user can specify which pages are to be pulled from each file and the sequence they should be placed in.

Platform Independence

PRO PDF to Metacode is available on Linux, Solaris and Windows platforms allowing users to install the software where they need it.
