

PRO PDF to PCL

Use **PRO PDF to PCL** to integrate the PDF page description language formats with popular desktop PCL printers

Crawford Technologies provides a way for organizations to integrate the PDF page description language formats with popular PCL printers by transforming them using the PRO PDF to PCL product. This conversion process provides a smooth migration path for PDF printer clients who want to move their applications to PCL printers without making costly application and architecture changes.

PRO PDF to PCL is a software product for Windows and Unix that interprets standard PDF language print streams and resources and transforms them into PCL. This allows organizations to combine the advantages of the industry standard PDF language with the low page cost, high quality and features of PCL printers.

PRO PDF to PCL performs an object-to-object transformation creating an optimized and compatible PCL file.

One of the keys to the success of **PRO PDF to PCL** is its superior font handling. PDF fonts can be automatically converted to equivalent PCL fonts as required during the conversion. Selected PDF fonts can be mapped to appropriate PCL fonts. PDF forms are converted to PCL macros and embedded in the print file. Images are converted to compressed PCL images embedded in the output file.

The **PRO PDF to PCL** product optimizes the PCL, creating small and compact PCL files that can quickly be routed to a desktop PCL printer.

PRO PDF to PCL allows PCL printers to be used for many new and exciting applications, which in the past would have been impossible. This extends their usefulness, increases their value to the organization, provides integration flexibility, and positions clients for the future.

During the conversion, **PRO PDF to PCL** can optimize PostScript files for archiving, retrieval and display, using the following powerful PRO options, eliminating the need for costly changes to the native print applications:

- The optional [PRO Indexer](#) can create index files or database commands, mark document breakpoints and generate image names using the contents of the documents, such as account number, customer number, customer name and statement date.
- The optional [PRO Document Enhancer](#) is a powerful document re-engineering tool, which can add, modify or suppress text, barcodes and images or rearrange the document pages during the conversion.
- With the optional [PRO Splitter](#) plug-in, large input files can be split during conversion into smaller multi page files, e.g. containing complete individual customer statements - without the need to modify the application that creates the print file. Having this capacity opens the door to Electronic Bill Presentation & Payment (EBPP). CrawfordTech has provided components for major vendors in this market since 1996.
- The optional [PRO Concatenator](#) component of the PRO Suite of transforms, can concatenate multiple like type files from various sources into a single file. The user can specify which pages are to be pulled from each file and the sequence they should be placed in.

Platform Independence

PRO PDF to PCL is available on Linux, Solaris and Windows platforms allowing users to install the software where they need it.
