

PRO PDF to Text

PRO PDF to Text is an ideal tool for customers who want to dynamically convert their documents from PDF format into text files.

CrawfordTech's PRO PDF to Text transformation product allows customers to convert their legacy data into a format that can be used with their document composition software as variable data or stored in preexisting data storage applications.

The **PRO PDF to Text** allows clients to dynamically create text files, which contain all of the text from the original PDF input files. **PRO PDF to Text** makes it very easy for customers to get the text out of their legacy PDF print streams without incurring any IT modification costs.

What is more, the **PRO PDF to Text** conversion software allows the users to determine whether the text in PDF overlays should be converted or not. It also gives the users the ability to control the output text's character encoding - ASCII or EBCDIC - and how that text should be formatted.

Platform Independence

PRO PDF to Text is available on Linux, Solaris and Windows platforms allowing users to install the software where they need it.
