

PRO PS to PCL

Use **PRO PS to PCL** to integrate the PostScript page description language formats with popular desktop PCL printers

Crawford Technologies provides a way for organizations to integrate the PostScript page description language formats with popular PCL printers by transforming them using the **PRO PS to PCL** product. This conversion process provides a smooth migration path for PostScript printer clients who want to move their applications to PCL printers without making costly application and architecture changes.

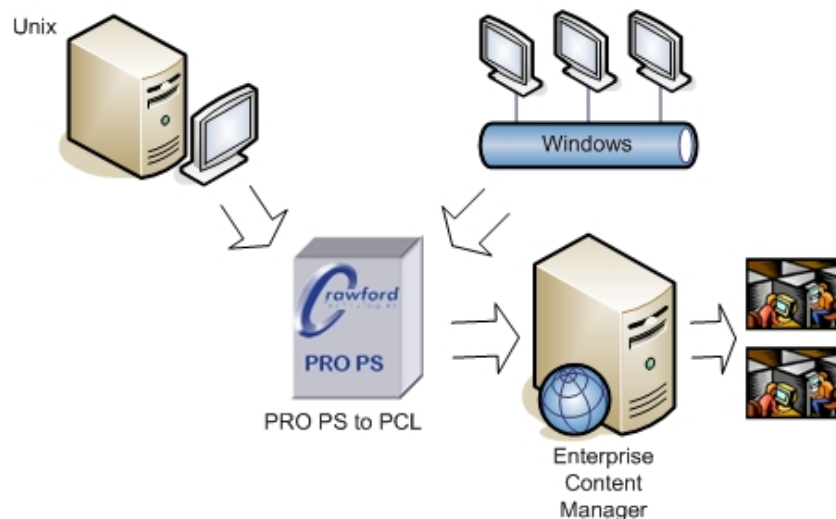

PRO PS to PCL is a software product for Windows and Unix that interprets standard PostScript language print streams and resources and transforms them into PCL. This allows organizations to combine the advantages of the industry standard PostScript language with the low page cost, high quality and features of PCL printers.

PRO PS to PCL performs an object-to-object transformation creating an optimized and compatible PCL file.

One of the keys to the success of **PRO PS to PCL** is its superior font handling. PostScript fonts can be automatically converted to equivalent PCL fonts as required during the conversion. Selected PostScript fonts can be mapped to appropriate PCL fonts. PostScript forms are converted to PCL macros and embedded in the print file. Images are converted to compressed PCL images embedded in the output file.

The **PRO PS to PCL** product optimizes the PCL, creating small and compact PCL files that can quickly be routed to a printer permitting rated speeds of operation, even on very high-speed printers.

PRO PS to PCL allows PCL printers to be used for many new and exciting applications, which in the past would have been impossible. This extends their usefulness, increases their value to the organization, provides integration flexibility, and positions clients for the future.

The **PRO PS to PCL** product can be extended with the following options:

[PRO Indexer](#)
[PRO Splitter](#)

[PRO Concatenator](#)
[PRO Document Enhancer](#)

Platform Independence

PRO PS to PCL is available on Linux, Solaris and Windows platforms allowing users to install the software where they need it.
