

# PRO Reprint

---

*Reduce time and effort by automating, standardizing and streamlining your reprint processes*

It is inevitable that documents and mail pieces will occasionally become lost or damaged during processing, but the effort required to complete a reprint of these pieces is expensive and time consuming. CrawfordTech's **Reprint Solutions** eliminate the support needs and processing delays that often plague the reprint process.

CrawfordTech's **Reprint Solutions** resolve the many costly and time consuming constraints associated with production reprints by enabling a more automated and streamlined response. Automatic reprint file generation reduces support costs, eliminates manual operator intervention, and trims the time it takes to complete a reprint. Operators quickly recover damaged pieces and are able to close out the entire mailing run without delay. Integrity and security are assured and compounding errors are minimized.

From an operational perspective, you choose the level of automation to enable a closed loop system and reduce your reprint costs. By incorporating manual capability, we have eliminated the need for you to return to composition to enable the required reprints. Also, now you can suppress specific documents and pages during the reprint to maximize production efficiency. Importantly, the ability to apply a greater degree of quality assurance on these pieces reduces legal liability.

How can we help you reduce the cost and effort associated with reprints?

- Automate production reprints and eliminate the need for production support or analyst intervention
- Reduce processing delays by issuing a reprint on-demand at a local printer
- Schedule a reprint automatically in the next production run for an entire set or just a few pages
- Allow operators to complete the days mail run and release your correspondence to the USPS.

Our reprint solutions give operators the flexibility to do what is best in a high volume production situation; quickly recovering the damaged pieces by issuing a reprint on a local printer or by automatically scheduling a reprint in the next production run. CrawfordTech's **Reprint Solutions** let you easily issue a complete rerun or simply reprint just a few pages. Since fewer resources are involved, you save time, money and effort.
