CRAWFORD TECHNOLOGIES INC. ANNOUNCES MAJOR PRODUCT ENHANCEMENTS TO THE OPTIONAL FEATURES OF ITS PRO SUITE OF PRINT STREAM TRANSFORMATION PRODUCTS

Toronto, Ontario, February 16, 2007 – Crawford Technologies Inc.

(CrawfordTech) has announced the availability of major product enhancements to the optional components of its industry leading PRO Transform family with the release of Version 3.0. The optional transform features include complex indexing and splitting of output files and the concatenation of like input files. These enhanced features can be applied to the widest range of inputs in the industry, including LCDS/Metacode, PostScript, PDF, AFP, PCL, HTML, flat files, line data, ASCII, EBCDIC, SCS and TIFF. The components are available on Linux, Solaris, HP-UX, AIX, z/OS and Windows platforms.

CrawfordTech's optional [PRO Splitter V3.0](#) component supports very fast and precise splitting (bursting) of output files during the transform, based on the required file size, the number of pages/sheets or individual statements, or on the intended users. PRO Splitter V3.0 also allows users to group multiple files for DVD/CD-ROM creation and use with ECM import utilities such as Filenet's MRII and HPII. To see how CrawfordTech customers are applying these powerful splitting features, click [PRO Splitter V3.0](#).

CrawfordTech's optional [PRO Concatenator V3.0](#), a new component, supports the concatenation of multiple like type files (e.g. PDFs) from various sources into a single job file. This capability can improve the flow through the print production/insertion process, allow for preparation of desktop print files for high volume printing or help achieve item quantities for maximum postal discounts. To learn more, click [PRO Concatenator V3.0](#).

CrawfordTech's optional [PRO Indexer V3.0](#) component supports the creation of highly complex index files in any format including XML, thanks to its powerful, new scripting language. With the PRO Indexer V3.0, users are able to script what/if/else statements that, for any particular page, can apply specific text extraction rules and required business logic routines. PRO Indexer V3.0 can also be used to add TLEs to AFP files and add bookmarks to PDF files. To see how CrawfordTech customers are applying these powerful indexing features, click [PRO Indexer V3.0](#).

“The release of these new, powerful enhancements to our industry leading PRO transform family provides key capabilities for organizations to successfully implement the PRO Suite of transforms as integral components of Web presentment, EBPB, Archival, Postal Automation, Automated Document Factory and Output Management solutions.”, said Ernie Crawford, President of Crawford Technologies Inc..

These new releases are being made available to CrawfordTech partners and customers with current support agreements as well as new customers beginning in late March 2007.

About Crawford Technologies Inc. Crawford Technologies Inc. (CrawfordTech) provides print stream transform, extraction and manipulation solutions that are unsurpassed in the industry.
